

Pearlescent film coated tablets? Why not!

High aesthetic value
with pearl effect colours,
a fast soluble film
coating compound

General Information on BIOGRUND

Since 1999, **BIOGRUND** has been developing and producing special powder preparations for film coating, sugar-coating, colouring and tableting, which are used in pharmaceutical products, food and nutritional supplements and cosmetics all over the world. These one-step products minimize and simplify working times for all applications. Easy, fast and reliable!

Product Information AquaPolish® G

BIOGRUND's one-step film coating system **AquaPolish® G** provides a protective and fast soluble glossy film on tablets, pellets, granules and capsules. It is a unique, dry milled, homogeneous blend of selected film-forming cellulose ethers, plasticizers, other additives and – on demand – **Candurin®** pearl effect colours, which give your product a high aesthetic value!

AquaPolish® G has been developed for the coating of all kinds of solid dosage forms. It is easily soluble and a reproducible high-quality film coating can be guaranteed. The widely approved, mineral colours of **Candurin®** are based on natural silicate combined with titanium dioxide and/or iron oxide.

A unique and exquisite range of **Candurin®** is available – from silver and gold, or interference up to iron oxide shades of red and bronze.

Due to its excellent compatibility with other colours, tailor-made solutions can be offered – an unmistakable appearance for your products!

Regulatory and quality aspects: All **AquaPolish® G** formulations are developed to meet the official regulatory requirements of the user's country for pharmaceutical products and for nutritional or dietary supplements.
