

Active ingredient  
protection – at  
high speed?  
Why not!

Enables high solid content  
dispersions for high  
productivity, a fast soluble  
aqueous film coating  
compound

## General Information on BIOGRUND

Since 1999, **BIOGRUND** has been developing and producing special powder preparations for film coating, sugar-coating, colouring and tableting, which are used in pharmaceutical products, food and nutritional supplements and cosmetics all over the world. These one-step products minimize and simplify working times for all applications. Easy, fast and reliable!

## Product Information AquaPolish® HS

**BIOGRUND's** one-step film coating system **AquaPolish® HS** provides a protective and fast soluble film on tablets, pellets, granules and capsules.

**AquaPolish® HS** is a combination of film-forming polymer **METHOCEL™** Premium VLV with plasticizing and colouring additives. The very low viscosity of HPMC enables high solid content dispersions for high speed productivity.

It is a homogeneous, dry-milled, powdered compound, developed for the coating of all kinds of solid dosage forms. It is easily soluble and a reproducible high-quality film coating can be guaranteed. Clear, white and coloured preparations can be tailor-made according to customer requirements.

In cooperation with DowWolff Cellulosics and Weimer Pharma we have proven that **AquaPolish® HS** is able to speed up your production. It can be applied by using conventional or modern coating equipment.

Regulatory and quality aspects: All **AquaPolish® HS** formulations are developed to meet the official regulatory requirements of the user's country for pharmaceutical products and for nutritional or dietary supplements.
