

A film coating
that really masks
bad odour?
Why not!

Seals the unpleasant smell of active ingredients, an easy-to-use film coating compound.

General Information on BIOGRUND

Since 1999, **BIOGRUND** has been developing and producing special powder preparations for film coating, sugar-coating, colouring and tableting, which are used in pharmaceutical products, food and nutritional supplements and cosmetics all over the world. These one-step products minimize and simplify working times for all applications. Easy, fast and reliable!

Product Information AquaPolish® OM

BIOGRUND's one-step film coating system **AquaPolish® OM** perfectly masks bad and strong smelling actives (e. g. herbal extracts). Sealing these characteristics by using **AquaPolish® OM** enables a pleasant application for the consumer and increases patient compliance. It provides a protective and economical coating on tablets, pellets, granules and capsules without influencing the disintegration time.

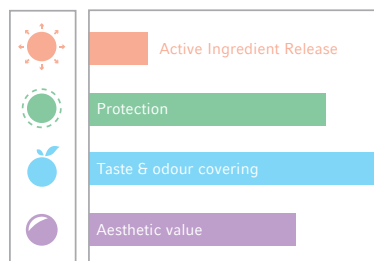

The product ingredients are a combination of HPMC, HPC and other cellulose ethers with odour masking additives. Due to the further additives which form a hardly soluble film, an odour-masking is achieved. It is also recommended for solid dosage forms where a combination of odour and taste masking is required.

Our compound is a homogenous, dry-milled powder developed for the coating of all kinds of solid dosage forms. It is easy to suspend and a reproducible high-quality film coating can be guaranteed. Clear, white and coloured preparations can be tailor-made according to customer requirements.

AquaPolish® OM can be applied by using conventional or modern coating equipment.

Regulatory and quality aspects: All **AquaPolish® OM** formulations are developed to meet the official regulatory requirements of the user's country for pharmaceutical products and for nutritional or dietary supplements.
