

Variability
and flexibility?
Why not!

Flexible and adhesive
coating, a ready-to-use
film coating compound

General Information on BIOGRUND

Since 1999, **BIOGRUND** has been developing and producing special powder preparations for film coating, sugar-coating, colouring and tableting, which are used in pharmaceutical products, food and nutritional supplements and cosmetics all over the world. These one-step products minimize and simplify working times for all applications. Easy, fast and reliable!

Product Information AquaPolish® PVA

BIOGRUND's one-step film coating system **AquaPolish® PVA** provides a protective and fast soluble film on tablets, pellets, granules and capsules. It is a unique, dry milled, homogeneous blend of selected film-forming polymers with colouring and a few plasticizing additives.

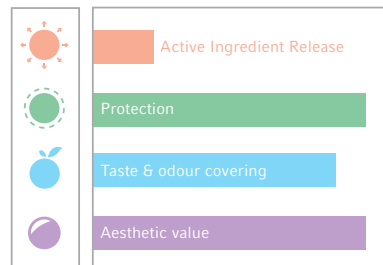

AquaPolish® PVA is a combination of polyvinyl alcohol and optional HPC, which gives excellent moisture sealing by using aqueous solvent applications.

AquaPolish® PVA has been developed for the coating of all kinds of solid dosage forms. It is produced with an innovative mixing and milling system, achieving the highest quality of a homogeneous and deagglomerated coating compound. It is easily soluble, and a reproducible high-quality film coating can be guaranteed. Clear, white and coloured preparations can be tailor-made according to customer requirements.

This product is designed to improve running production processes and, furthermore, is an ideal basis for researching new solutions. Because of its particular formulae, it can be used in a simple and easy way. It can be applied using conventional or modern coating equipment.

Regulatory and quality aspects: All **AquaPolish® PVA** formulations are developed to meet the official regulatory requirements of the user's country for pharmaceutical products and for nutritional oral solid dosage forms.
