

A film coating
that really
masks taste?
Why not!

Masks the bad taste of active ingredients, an easy-to-use film coating compound

General Information on BIOGRUND

Since 1999, **BIOGRUND** has been developing and producing special powder preparations for film coating, sugar-coating, colouring and tableting, which are used in pharmaceutical products, food and nutritional supplements and cosmetics all over the world. These one-step products minimize and simplify working times for all applications. Easy, fast and reliable!

Product Information AquaPolish® TC

BIOGRUND's one-step film coating system **AquaPolish® TC** perfectly masks bad tasting actives and provides a fast soluble film on tablets, pellets, granules and capsules.

AquaPolish® TC is a combination of HPMC, HPC and other cellulose ethers with taste masking additives. Due to the further additives, which form a hardly soluble film, a taste-masking is achieved.

The compound is a homogeneous, dry-milled powder, developed for the coating of all kinds of solid dosage forms. It is easy to suspend and a reproducible high-quality film coating can be guaranteed. Clear, white and coloured preparations can be tailor-made according to customer requirements.

AquaPolish® TC can be applied by using conventional or modern coating equipment.

Regulatory and quality aspects: All **AquaPolish® TC** formulations are developed to meet the official regulatory requirements of the user's country for pharmaceutical products and for nutritional or dietary supplements.
