

Forget about
wet granulation –
apply direct
compression!
Why not?

Dry binder granulate with
optimized flowing properties,
an easy-to-use tableting
compound

General Information on BIOGRUND

Since 1999, **BIOGRUND** has been developing and producing special powder preparations for film coating, sugar-coating, colouring and tableting, which are used in pharmaceutical products, food and nutritional supplements and cosmetics all over the world. These one-step products minimize and simplify working times for all applications. Easy, fast and reliable!

Product Information CompactCel®

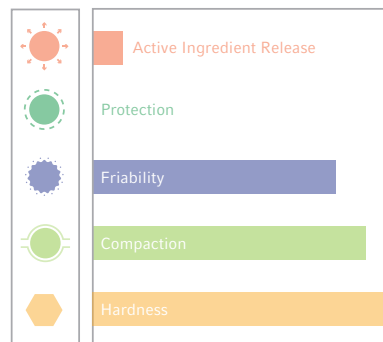

BIOGRUND's one-step binding agent **CompactCel®** provides an easy to use, granulated and homogeneous compound of PVP/NaCMC or HPC/NaCMC, which acts as a perfect dry binder.

With **CompactCel®** it is possible to produce direct compressed tablets containing excipients and a high content of active ingredients (which are normally incompressible) in one step. A wet granulation step to isolate the active ingredients with an excipient is in most cases not needed. Due to the increased particle size, the granulated compound has optimized flow properties.

CompactCel® increases the hardness and improves the friability of the tablet. **BIOGRUND** recommends using 2–5% within the core formulation to achieve best results. Both compositions can be used for pharmaceutical and nutritional applications.

Regulatory and quality aspects: All **CompactCel®** formulations are developed to meet the official regulatory requirements of the user's country for pharmaceutical products and for nutritional or dietary supplements.
