

Pearlescent
solid-coloured
tablets?
Why not!

High aesthetic value,
simplified colouring of
tablets, pellets, granules

General Information on BIOGRUND

Since 1999, **BIOGRUND** has been developing and producing special powder preparations for film coating, sugar-coating, colouring and tableting, which are used in pharmaceutical products, food and nutritional supplements and cosmetics all over the world. These one-step products minimize and simplify working times for all applications. Easy, fast and reliable!

Product Information TopMill® G

BIOGRUND's ready-to-use colouring agent **TopMill® G** provides a homogeneous solid-coloured product. It is a unique, dry milled, homogeneous blend of **Candurin®** pearl effect colours with additional excipients. The widely approved mineral colours are based on natural silicate combined with titanium dioxide and/or iron oxide and give your tablets a brilliant and unique appearance.

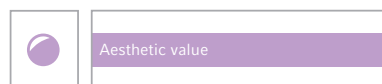

TopMill® G is a ready-to-use master batch, developed for the colouring of all kinds of solid dosage forms. It is easy to suspend and a reproducible high-quality colour can be guaranteed, which has been proved at Budenheim's Tableting Competence Center (TCC).

A unique and exquisite range of **Candurin®** is available – from silver and gold, or interference up to iron oxide shades of red and bronze.

Due to its excellent compatibility with other colours, tailor-made solutions can be offered – an unmistakable appearance for your products!

Regulatory and quality aspects: All **TopMill® G** formulations are developed to meet the official regulatory requirements of the user's country for pharmaceutical products and for nutritional or dietary supplements.
